Highlights

| | |
|--------------------|--|
| Global | Global risk appetite was undeterred by Saudi Arabia and Russia's announcement to freeze oil production at January levels, falling short of market expectations for actual cuts and Iran is not expected to participate. China's surge in new loans to CNY1.51tn may be partly due to seasonal front-loading. Today's focus will be on the US FOMC minutes, industrial production, housing starts, building permits and PPI, UK's jobless rates, Taiwan's 4Q15 GDP growth, S'pore's COE premium tender results. |
| US | NAHB housing market index fell from a revised 61 reading in Jan to a 9-month low of 58 in Feb, as the buyer traffic gauge slid to 39 (lowest since May), dragged down by single-family sales, albeit the 6-month outlook rose from 64 to 65. Empire manufacturing shifted from -19.37 to -16.64 in Feb, suggesting weakness amid a stronger USD and weak global demand, albeit the 6-month ahead new orders and shipments gauges improved. Total net TIC outflows rose from a revised US\$1.1b in Nov to US\$114b in Dec, with net long-term flows reversing from a US\$31.4b inflow to a US\$29.4b outflow as China cut its UST bond holdings by US\$18.4b to a 10-month low of US\$1.25tn and Japan's holdings fell US\$22.4b to US\$1.12tn. |
| EZ | Eurozone's ZEW survey expectations index fell from 22.7 in Jan to 13.6 in Feb, with the German ZEW expectations gauge diving from 10.2 to 1, albeit the current situation gauge held up better at 52.3 (previously 59.7). The data reinforced the hit to investor confidence amid Chinese uncertainties and low oil prices, as well as increased credit default risks. Note the Bundesbank had cut its German inflation forecast amid the ongoing decline in oil prices. |
| Singapore | NODX fell more than expected by 9.9% yoy (+0.7% mom sa) amid the weak external demand conditions, especially with the China slowdown story. This is worse than the 7.2% yoy contraction (-0.3% mom sa) reading in Dec and the -7.5% yoy (+3.5% mom sa) we anticipated, albeit the Jan 2015 base was high. Electronics exports also fell 0.6% yoy in Jan, which is a deterioration from the 0.3% decline in Dec15, and petrochemical exports also plunged 18.3%, whereas pharmaceuticals rose 6.9%. Only 2 of the top 10 NODX markets rose in Jan, namely EU28 (+14.3% yoy) and Malaysia (+2.8%), whilst the biggest drags were China (-25.2%), Taiwan (-26.5%) and Indonesia (-11.4%). Looking ahead, the NODX prospects remain tepid in 1H16. |
| China | The surprisingly strong financial and credit data in January may delay market expectations on further easing of monetary policy. China's new Yuan loans increased by CNY2.5 trillion in January. What's more impressive is that medium and long term loans to corporates increased by CNY1.06 trillion, highest in record. This usually implies reviving economic activities. However, the data might be distorted by a few factors. Furthermore, China's cabinet is discussing to lower the minimum bad loan provision ratios for banks to free up more capital for lending. |
| Commodities | The Doha talks disappointed with a mere 'production freeze', rather than a production cut which was priced-in in the recent rally in oil prices. Specifically, four oil producers, which includes Saudi Arabia, Russia, Qatar and Venezuela, had agreed to freeze production but in contingent with other producers joining in. The freeze is clearly not sufficient to arrest the falling oil prices, as WTI and Brent plummeted immediately upon the news. Do read our latest <Oil Outlook – Agreeing to what has been agreed (17 Feb)>. |

Major Market

- **US:** Wall Street rallied yesterday after re-opening from Monday's Presidents Day holiday, with the Dow +1.39%, S&P500 +1.65% and Nasdaq +2.27%. VIX -5.08% to 24.11. The UST bond market sold off amid the improvement in risk appetite and a US\$12b "green" debt sale by Apple, with the 2- and 10-year bond yields higher at 0.73% and 1.77% respectively. Fed's Harker said there would be a "high hurdle" to imposing negative interest rates as the US economy remains "fundamentally strong", and "I am approaching near-term policy a bit more cautiously than I did a few months ago...that is part of being data dependent".
- **Singapore:** The STI extended gains by another 1.41% to close at 2644.58 yesterday, as optimism among the global bourses continued to spread. Give Wall Street's positive overnight lead, but mixed morning performances by Nikkei and Kospi, expect the STI to attempt to climb higher today, but gains may be capped. The STI's support and resistance are 2620 and 2680 respectively. The SGS bonds are come under some pressure given the continued sell-off in UST bonds.
- **China:** The surprisingly strong financial and credit data in January may delay market expectations on further easing of monetary policy. China's new Yuan loans increased by CNY2.5 trillion in January. What's more impressive is that medium and long term loans to corporates increased by CNY1.06 trillion, highest in record. This usually implies reviving economic activities. However, the data might be distorted by a few factors. First, banks may rush to distribute loans to support infrastructure projects in the beginning of the year. Second, Chinese corporates may replace their foreign currency liability with local currency liability due to expectations on RMB depreciation. Third, some bills may be replaced by loans after January's bill scandal. As such, the strong loan data may not be sustainable and is expected to fall in the coming months. In addition, M1 grew by 18.6%, continuing to outpace 14% M2 growth. Although it might be attributable to fiscal support, the stronger than expected M1 suggests an improving economic outlook on the back of easing monetary and fiscal policies. Overall speaking, we think the data is positive but may not be sustainable. As such, we need to wait for more details to paint a complete picture.
- **Indonesia:** The Financial Services Authority, known locally by its acronym OJK, is preparing a new policy to regulate interest rates in the banking industry, as reported by Jakarta Post. The report did not offer further details on what those regulations will be, but suggested that OJK is aiming to push down lending rates. So far, OJK has capped the special rates offered by larger banks to big depositors at 200-225bps above BI rate.

Bond Market Updates

- **Market Commentary:** The SGD swap curve flattened yesterday, with the short-end rates trading 2bps-3bps lower, while the long-end rates traded 6bps lower. In the broader dollar space, JACI IG corporates tightened 5bps to 250bps, while the yield on the JACI HY corporates decreased by 5bps to 8.38%. 10y UST yield increased by 2bps to 1.77%.
- **Rating Changes:** S&P affirmed its Korea Western Power Co Ltd long-term corporate credit and debt ratings at "AA-". S&P subsequently withdrew its rating for Korea Western Power Co Ltd. Outlook is stable. S&P placed Indian Overseas Bank's LT Foreign Issuer ratings of BB+ on negative credit watch. This action was driven by S&P's expectations that the issuer's mounting credit losses have strained its capitalization, making it more difficult for the issuer to meet its regulatory capital requirements by March 2016. S&P indicated that they intend to resolve the credit watch within the next four months, when more clarity regarding any government capital infusion plans is provided.
