Highlights

Global	After a very volatile week last week, Asian markets are probably hoping for a more stable trading tone in the CNY-shortened holiday week, following the US deal to raise the budget ceiling by US\$300b for 2 years. Overall, investors are still trying to catch their breath after the roller-coaster ride in global equity, bond and commodity markets (oil is back below US\$60 per barrel), with US inflation data and spending plans on tap with implications for the deficit and UST issuance after the 10-year UST bond yield closed near where it started the week at 2.85%. The start of the Winter Olympics in Pyeongchang also saw Kim Jong Un's sister Kim Yo Jong delivering an invitation to South Korean president Moon Jae-in to a summit, which may help alleviate Korean geopolitical tensions in the near-term. Today's economic data calendar is relatively light with only S'pore's Retail Sales (likely to have grown 4.4% yoy and shrunk 1.7 mom sa in Dec after printing 5.3% yoy and 5.1% mom sa in Nov17), India's CPI and Industrial Production. Scheduled speakers include BOE's Vlieghe and McCafferty and RBA's Ellis. Other central bank policy meetings to watch this week are BOT (likely no change at 1.5% on 14 Feb) and BI (also likely static at 4.25% on 15 Feb).
NS	Fed rhetoric suggests no knee-jerk concern about last week's market volatility, with Kaplan opining the recent selloff as a "market event" that could be "healthy". Meanwhile, wholesale inventories rose 0.4% mom in Dec17.
CN	Both China's CPI and PPI moderated in January, in line with market expectation. CPI moderated to 1.5% yoy from 1.8% yoy while PPI moderated to 4.3% yoy from 4.9% yoy. The moderation was mainly due to seasonal effect as this year's Chinese New Year falls in February, one month later than last year's Chinese New Year holiday. On month-on-month reading, CPI, however, accelerated to 0.6% mom due to higher food prices. We expect January to be the last month for China's CPI to stay sub 2% in 2018 as low base effect is likely to drive CPI higher even with few additional price shocks. CPI is expected to test above 2.5% yoy in February due to the Chinese New Year and is expected to stay above 2% in the coming months.
JP	Reports that Japanese PM Abe plans to nominate BOJ governor Kuroda for another term is seen as providing policy continuity amidst the exit debate and JPY strength.
MA	Growth of the industrial production index slowed to 2.9%, YoY in Dec 2017 (Nov 2017: 5.0%). The slower growth was mainly driven by a decline in the crude oil and natural gas indexes.
CMD	WTI fell \$60/bbl, posting its biggest fall in more than two years, while Brent fell in tandem. In all, crude oil prices fell by more than 3.0% over the weekend, a behaviour also seen in other growth-related commodities like copper, nickel and aluminium. In our view, the profit-taking is likely stemmed from an onslaught of technical selling, with both crude oil benchmarks edging below its critical 50-day moving average and erasing all of their gains enjoyed since the start of 2018. Catching a falling knife appears to be unadvisable at this point, although the selling momentum could take some breather into the trading day ahead on the back of a relatively better risk appetite, seen from the uptick in Wall Street.

Major Market

- US: Equities continued to be volatile on Friday, reversing an early drop to close higher. The tech sector led gains, where ten of eleven S&P 500 sectors saw gains. Only the energy sector ended in the red, dragged by the weakness in crude prices. Overall, the S&P 500 added 1.38% while the Dow and Nasdaq Composite gained 1.49% and 1.44% respectively. Equities ended the worst week since Jan 2016, with the S&P 500 slipping 5.2% for the week. Volatility may be expected again this week, but the key would be to watch for a spreading of the jitters into other asset classes. VIX slipped to 29.06, compared to 33.46 previously.
- Meanwhile, the US Treasury yield curve continues to steepen. The 2y benchmark yield slipped 3 bps to 2.075%, with the front end of the curve still seeing spillover risk-off sentiments. The 10y added almost 3 bps to 2.852%, closing the week almost at the same level as it started. CPI inflation data will be key to watch this week, as investors digest the rapid up move in the long end yields.
- **Singapore:** The STI sank 1.13% to close at 3377.24 on Friday amid the sea of red ink for Asian bourses, but more positive Friday Wall Street cues and morning gains in Kospi may lend the STI some support today. STI support and resistance are at 3341 and 3388 respectively. With the UST bond yield curve steepening again by 6bps, SGS bonds may follow today, especially with the 30-year re-opening size to be announced on 19 Feb.
- China: The moderation of PPI is mainly due to high base effect, which is expected to cap PPI in the coming months. We expect PPI to stay below 5% yoy in the next few months despite volatile commodity prices. We think the current inflation data have limited impact on China's monetary policy decision. Nevertheless, given CPI is likely to trend higher on base effect, we think market should pay closer attention to China's inflation data from the second quarter to gauge whether there is any potential price shock.
- Indonesia: The current account (CA) deficit widened to 2.2% of GDP in 4Q 2017 (3Q 2017: 1.7%). The increase was due to higher imports of goods related to production activities. For the entire 2017, the CA deficit was at 1.7% of GDP. The balance of payment as a whole for 2017 posted an \$11.6bn surplus, which was lower than the \$12.1bn reported in 2016. There were increases in the capital and financial accounts surpluses due to an increase in direct and portfolio investments.
- **Macau:** The government has launched three cooling measures to tame the housing market. This may have two implications. First, homeowners will be encouraged to lease their properties while increase in first-home buyers will lower the rental housing demand. Therefore, housing rents are likely to be suppressed. Second, apart from curbing investment demand, the cooling measure will reduce supply in the secondary market. Adding that new supply of public and private housing is set to increase moderately, an expected increase in first-home buyers may keep the property price elevated. Still, potential interest rate increase and stock market correction may moderate the housing market growth.

Bond Market Updates

 Market Commentary: The SGD swap curve bear-flattened last Friday, with swap rates for the shorter tenors trading 4-5bps higher while the longer tenors traded 4bps higher. In the broader dollar space, the Bloomberg Barclays Asia USD IG Bond Index average OAS widened 3bps to 112bps while the Bloomberg Barclays Asia USD HY Bond Index

average OAS traded widened 15bps to 360bps. 10Y UST yields rose 3bps to 2.85% last Friday, driven by signs of inflation amid an improving global backdrop and speculation on whether the Federal Reserve and other major central banks would act quicker to raise interest rates.

• Rating Changes: Moody's has affirmed the long-term local and foreign currency bank deposit ratings of Central Bank of India (CBI) and Indian Overseas Bank (IOB) at 'Ba3', as well as IOB's senior unsecured debt at 'Ba3'. The outlook has been revised to positive from stable. The rating action reflects Moody's view on the expected evolution of the banks' balance sheets, including a stabilisation in asset quality, a moderate improvement in profitability metrics, and stable funding and liquidity positions. According to the recapitalisation plan announced in October 2017, the government has committed to infuse INR1.53 trillion into the public sector banks by March 2019.

This report is intended for your sole use and information. By accepting this report, you agree that you shall not share, communicate, distribute, deliver a copy of or otherwise disclose in any way all or any part of this report or any information contained herein (such report, part thereof and information, "Relevant Materials") to any person or entity (including, without limitation, any overseas office, affiliate, parent entity, subsidiary entity or related entity) (any such person or entity, a "Relevant Entity") in breach of any law, rule, regulation, guidance or similar. In particular, you agree not to share, communicate, distribute, deliver or otherwise disclose any Relevant Materials to any Relevant Entity that is subject to the Markets in Financial Instruments Directive (2014/65/EU) ("MiFID") and the EU's Markets in Financial Instruments Regulation (600/2014) ("MiFIR") (together referred to as "MiFID II"), or any part thereof, as implemented in any jurisdiction. No member of the OCBC Group shall be liable or responsible for the compliance by you or any Relevant Entity with any law, rule, regulation, guidance or similar (including, without limitation, MiFID II, as implemented in any jurisdiction).
