Disclosure under Basel II Pillar III

Purpose of disclosure:

The Notification of the Bank of Thailand No: SorNorSor. 14/2562 dated 07 May 2019, Re: Disclosure of Information on Capital Fund Maintenance for Banks in Thailand (No.2), requires banks in Thailand to disclose the information on Capital Fund maintenance and their risks. This is to enable market participants to assess the scope of application, capital, risk exposure, risk assessment process and the capital adequacy of the banks.

This disclosure reflects only information associated solely to the activities of Bangkok branch. Please refer to disclosure under Basel II Pillar III for OCBC group as per link appended below.

Impairment of financial assets

Impairment allowances for financial assets are assessed using a forward-looking expected credit loss ("ECL") model in accordance with the requirements of TFRS 9.

Scope

Under TFRS 9, the ECL model is applied to debt financial assets measured at amortised cost or FVOCI and most off-balance sheet loan commitments and financial guarantees

Expected Credit Loss Impairment Model

Under TFRS 9, credit loss allowances are measured on each reporting date according to a threestage expected credit loss impairment model:

- Stage 1 On initial recognition, expected credit loss will be that resulting from default events that are possible over the next 12 months
- Stage 2 Following a significant increase in credit risk of the financial assets since its initial recognition, the credit loss allowance will be that resulting from default events that are possible over the expected life of the asset.
- Stage 3 When a financial asset exhibits objective evidence of impairment and is considered to be credit-impaired, the credit loss allowance will be the full lifetime expected credit loss.

Measurement

ECLs are a probability-weighted estimate of credit losses. They are measured as follows:

- (a) Financial assets that are not credit-impaired at the reporting date: as the present value of all cash shortfalls, which is the difference between the cash flows due to the entity in accordance with the contract and the cash flows that the Branch expects to receive;
- (b) Financial assets that are credit-impaired at the reporting date: as the difference between the gross carrying amount and the present value of estimated future cash flows;
- (c) Undrawn loan commitments: as the present value of the difference between the contractual cash flows that are due to the Branch if the commitment is drawn down and the cash flows that the Branch expects to receive; and
- (d) Financial guarantee contracts: the expected payments to reimburse the holder less any amounts that the Branch expects to recover.

The key inputs used in the measurement of ECL are:

- Probability of default ("PD") This is an estimate of the likelihood of default over a given time horizon
- Exposure at default ("EAD") This is an estimate of the exposure at a future default date, taking into account expected changes in the exposure after the reporting date, including repayments of principal and interest as well as expected drawdowns on committed facilities
- Loss given default ("LGD") This is an estimate of the loss arising on default. It is based on the difference between the contractual cash flows due and those that the Group would expect to receive, including from any collateral.

ECL for exposures in Stage 1 is calculated by multiplying the 12-month PD by LGD and EAD. Lifetime ECL is calculated by multiplying lifetime PD by LGD and EAD.

All key inputs (PD, LGD and EAD) used to estimate Stage 1 and Stage 2 credit loss allowances are modelled based on three macroeconomic scenarios (or changes in macroeconomic variables) that are most closely correlated with credit losses in the relevant portfolio.

The three macroeconomic scenarios represent a most likely "Base" outcome, and two other less likely "Upside" and "Downside" scenarios. These scenarios are probability-weighted and

underlying key macroeconomic assumptions are based on independent external and in-house views. The assumptions are subject to regular management reviews to reflect current economic situations.

Each macroeconomic scenario used in the expected credit loss calculation includes a projection of all relevant macroeconomic variables used in the models for the lifetime period, reverting to long-run averages generally after 3 to 5 years periods. Depending on their usage in the models, macroeconomic variables are projected at a country or more granular level which differ by portfolio. The primary macroeconomic variables adopted are Gross Domestic Product, Unemployment rate, Property Price Index and Interest rate.

The definition of default used in the measurement of expected credit losses is consistent with the definition of default used for credit risk management purposes. The default definition has been applied consistently to model the PD, LGD and EAD throughout Branch's expected credit loss calculations.

The Branch considers a financial asset to be in default by assessing both quantitative and qualitative criteria such as days past due and the terms of financial covenants. A default occurs when the borrower or bond issuer is unlikely to pay its credit obligations to the Branch in full, without recourse by the Branch to actions such as realising security (if any is held) or when the financial asset is more than 90 days past due.

The maximum period considered when estimating ECLs is the maximum contractual period over which the Branch is exposed to credit risk.

Financial assets are written off against their related impairment allowances when all feasible recovery actions have been exhausted or when the recovery prospects are considered remote.

Movement Between Stages

Movements between Stage 1 and Stage 2 are based on whether an instrument's credit risk as at the reporting date has increased significantly since its initial recognition.

In accordance with TFRS 9, financial assets are classified in Stage 2 where there is a significant increase in credit risk since initial recognition, where the credit loss allowance will be measured using lifetime ECL.

The Branch considers both qualitative and quantitative parameters in the assessment of whether this is a significant increase in credit risk. These include the following:

- (a) The Branch has established thresholds for significant increases in credit risk based on both a relative and absolute change in lifetime PD relative to initial recognition.
- (b) The Branch conducts qualitative assessment to ascertain if there has been significant increase in credit risk.
- (c) The Branch uses days past due as a further indication of significant increase in credit risk.

Movements between Stage 2 and Stage 3 are based on whether financial assets are creditimpaired as at the reporting date. The determination of whether a financial asset is creditimpaired under TFRS 9 will be based on objective evidence of impairment.

The assessments for a significant increase in credit risk since initial recognition and credit-impairment are performed independently as at each reporting period. Assets can move in both directions through the stages of the impairment model. After a financial asset has migrated to Stage 2, if it is no longer considered that credit risk has significantly increased relative to initial recognition in a subsequent reporting period, it will move back to Stage 1. A modification of the terms of a financial asset that does not result in derecognition will result in the financial asset being transferred out of Stage 3 if the indicators of it being identified as credit-impaired is no longer met and that the evidence for its transfer out of Stage 3 solely relates to events such as up-to-date and timely payment occurring in the subsequent periods.

If a modified financial asset results in derecognition, the new financial asset will be recognised under Stage 1, unless it is assessed to be credit-impaired at time of the modification.

Surplus reserve

The Branch measures the surplus reserve on the date of adoption for new financial reporting standards related to financial instruments by comparing the difference between allowance for expected credit losses according to requirement under new financial reporting standards related to financial instruments and total reserves that the Branch had on 31 December 2019. In which, the Branch will amortised the surplus reverse using straight-line method by 5 years consecutively in accordance with notification to utilise surplus reserve from Bank of Thailand dated on 6 November 2019.

Capital Section 1: Capital Structure

Oversea-Chinese Banking Corporation Limited-Bangkok Branch ("Bangkok Branch") is a Branch of Oversea-Chinese Banking Corporation Limited (OCBC Bank) incorporated and domiciled in Singapore.

According to the Section 32 of the Financial Institution Business Act, B.E. 2551, branches of foreign commercial banks licensed to operate business as prescribed in the Act shall maintain assets in Thailand or hold securities in other countries in accordance with the regulation prescribed in the notification of the Bank of Thailand. The said assets and securities shall be considered as capital funds under the Act.

As of 31 December 2021, "Bangkok Branch' has the capital fund structure according to Section 32 of Financial Institution Business Act, B.E. 2551 as follows:

Capital
Item 1 : Capital Structure
Structure of capital fund of Oversea-Chinese Banking Corporation Limited-Bangkok Branch

	Un	it: In million Baht
ltem	31/12/2021	30/06/2021
1. Assets required to be maintained under Section 32	10,265	10,245
2 Sum of net capital for maintenance of assets under Section 32 and net		
balance of inter-office accounts (2.1+2.2)	21,574	21,054
2.1 Capital for maintenance of assets under Section 32	9,856	9,583
2.2 Net balance of inter-office accounts which the branch is the debtor (the		
creditor) to the head office and other branches located in other countries, the		
parent company and subsidiaries of the head office.	11,736	11,471

Assets maintained under Section 32	10,265
Government bonds	2,458
Bank of Thailand bonds	6,100
Non-central government public sector entities: PSEs Bonds	
Bonds guaranteed by Ministry of Finance	1,707
Immovable properties	-

Section 2: Capital Adequacy

To promote the banks to establish a good risk management system and to maintain sufficient capital to cope with unexpected loss in the future, the Bank of Thailand has stipulated capital supervisory guidelines for the banks which are stipulated in the Notification no. Sor.Nor.Sor.12/2555, Re: Regulations on Capital Supervision for Commercial Banks The Notification requires foreign bank branches to maintain minimum capital requirements at no less than 11.000% of aggregated risk weighted assets of the three major risks, i.e. credit risk, market risk and operational risk (known as Basel II Pillar I).

The computation of risk-weighted assets for credit risk of Bangkok Branch includes credit risk, counterparty credit risk and Non-delivery versus payment of the following exposures:

- o Assets and off-balance sheet items in banking book,
- Off-balance items pertaining to OTC derivatives and repo style transactions for trading book items calculated for counterparty credit risk,
- o Position pertaining to unsettled payment and non-delivery (unsettled transaction),
- Assets and off-balance sheets items in trading book that do not meet the threshold level as stipulated in the Notification of the Bank of Thailand Re:Supervisory Guideline on Market Risk and Capital Maintenance to cope with Market risk of the banks.

The approach adopted for calculation of the credit risk weighted assets presently is Standardized Approach as the Branch's size is relatively small as compared to the OCBC Group.

For market risks, the risks may arise from movements of interest rate, foreign exchange rates and prices of instruments in the money and capital markets which may negatively affect the Bank. The minimum capital requirement for market risk is required for positions in trading book, including interest rate risk from interest rate exposure in trading account, equity instrument price risk from exposures pertaining to equity instrument in trading account, foreign exchange risk from all exposures pertaining to foreign currencies and commodity price risk from all exposures pertaining to commodity products.

OCBC Bangkok has selected the Standardized method for calculating the capital requirements for market risks as the transactions in trading book are neither complicated nor significant.

For operational risks, the Bank of Thailand permits banks to use 3 methods for calculation of equivalent risk-weighted asset: Basic Indicator Approach (BIA) and Standardized Approach (SA-OR) / ASA and Advance Measurement Approach (AMA). OCBC Bangkok has selected to use the Standardized Approach for calculation of the capital charge for operational risks.

The following tables are minimum capital requirement for each type of risk

Risk exposure and assessment of banks

As a Branch of OCBC Bank, Bangkok Branch adopts and is guided by our Head Office on risk management policies, processes as well as risk measurement and monitoring. Please refer to our risk management policies from page 103 - 113 as per link appended below:

https://www.ocbc.com/assets/pdf/annual%20reports/2018/ocbc_ar2018_english.pdf

Credit risk disclosure

Definition of Default

A borrower is recognized to be in default when evidenced by either non-payment (failure to pay any sum due), unlikely to repay in full or to meet any criteria as prescribed in the Notification of the Bank of Thailand no. SorNorSor. 5/2559 please refer to the BOT website as per link appended)

https://www.bot.or.th/Thai/FIPCS/Documents/FPG/2559/ThaiPDF/25590128.pdf

Impairment

The carrying amounts of the Branch's assets are reviewed at each reporting date to determine whether there is any indication of impairment. If any such indication exists, the assets' recoverable amounts are estimated.

An impairment loss is recognised if the carrying amount of an asset or its cash-generating unit exceeds its recoverable amount. The impairment loss is recognised in profit or loss unless it reverses a previous revaluation credited to the accounts with head office and other branches of the same juristic person, in which case it is charged to the accounts with head office and other branches of the same juristic person.

Calculation of recoverable amount

The recoverable amount of a non-financial asset is the greater of the asset's value in use and fair value less costs to sell. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. For an asset that does not generate cash inflows largely independent of those from other assets, the recoverable amount is determined for the cash-generating unit to which the asset belongs.

Reversals of impairment

Impairment losses recognised in prior periods in respect of other non-financial assets are assessed at each reporting date for any indications that the loss has decreased or no longer exists. An impairment loss is reversed if there has been a change in the estimates used to determine the recoverable amount. An impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortisation, if no impairment loss had been recognised.

Credit Risk Exposures

In compliance with the Notification of the Bank of Thailand, no. No.: SorNorSor. 3/2563, Re: Regulations for Credit Risk Asset Calculations for Commercial Banks using the Standardised Approach (SA Approach), OCBC Bangkok Branch has classified the assets of the Branch into 9 categories as follows:-

- (1.1) Claims on sovereigns and central banks
- (1.2) Claims on provincial administrations, government entities, and state enterprises (PSEs)
- (1.3) Claims on multilateral development banks (MDBs) (N/A)
- (1.4) Claims on financial institutions
- (1.5) Claims on securities firms
- (1.6) Claims on corporates
- (1.7) Claims in the retail portfolios (NA)
- (1.8) Residential mortgage loans (NA)
- (1.9) Other assets

OCBC Bangkok Branch uses the country risk rating of either Moody's Investors Service, Standard and Poor's or Fitch Rating for the computation of risk weighted assets of claims on

Banks/Financial Institutions or PSEs that are classified as financial institutions, as well as claims on corporates according to the Notification of the Bank of Thailand No. SorNorSor. 3/2563.

Credit Risk Mitigation

The Notification of the Bank of Thailand no. SorNorSor. 3/2563 permits banks to use credit risk mitigation for Standardized Approach as follow:

- 1. Financial Collateral
- 2. On-Balance Sheet Netting (netting method between assets (loans) and debts (deposits) with the same counterparty as prescribed under attachment 6 of the Notification)
- 3. Guarantees and Credit Derivatives (banks shall meet criteria as prescribed under attachment 10 of the Notification).

The credit risk mitigation that is being used in OCBC Bangkok Branch presently are Financial Collaterals and Guarantees.

Disclosure on market risks for trading book position

Market Risk" refer to the risks which banks may encounter due to the changes on the on and off balance sheet positions as a result of the variation in interest rate, price of equity instruments, foreign exchange rate and price of commodities. The variation in interest rate and price of equity instrument may be caused by general market risk and/or specific risk of the issuers.

^{**} Values after on-balance sheets and off-balance sheets netting

^{1/2} Eligible financial collateral that the Bank of Thailand allows to use for risk mitigation. Commercial banks applying the commerhensive approach shall disclose the value after haircut.

OCBC Bangkok Branch does not engage in commodity and debt instruments for trading purposes. However, according to the notification of the Bank of Thailand no. SorNorSor. 94/2551, Re: Guideline on Supervision of Market Risk and Capital Requirement for Market Risk of Financial Institutions, OCBC Bangkok Branch is required to calculate risk weighted assets for transactions relating to foreign exchange and interest rate risks. OCBC Bangkok Branch has adopted the Standardized Approach for computation of the risk weighted assets for market risk.

4.1 Market risk under the Standardised Approach

Table 30 Minimum capital requirements for each type of market risk under the Standardised Approach

Unit: In million Baht

Minimum capital requirements for market risk under the Standardized Approach	31/12/2021	30/06/2021

^{*} Commercial banks shall use the percentage changes in interest rates of 100 bps .

Disclosure on operational risks

Operational risks refer to the potential risks from damages that may arise from inadequacy or impairment of the Bank's internal controls, processes, personal and work system or due to external events, including legal risk but excluding strategic risk and reputation risk.

Under the Bank of Thailand's notification no.SorNorSor 95/2551 and no.SorNorSor 5/2555, there are 3 methods i.e. Basic Indicator Approach (BIA), Standardized Approach (SA-OR) and ASA or Advance Measurement Approach (AMA) for the computation of risk weighted assets for operational risks.

OCBC Bangkok Branch has adopted SA-OR for the computation of risk weighted assets. To obtain the risk weighted assets for operational risk, OCBC Bangkok Branch allocates gross income to each business as prescribed by the Bank of Thailand and apply constant beta value to its respective business line.

Remark: Please refer to the information of Basel II Pillar III Disclosure of Oversea-Chinese Banking Corporation Limited as per link appended below.
