#### **Section 2: Capital Adequacy**

To promote the banks to establish a good risk management system and to maintain sufficient capital to cope with unexpected loss in the future, the Bank of Thailand has stipulated capital supervisory guidelines for the banks which are stipulated in the Notification no. Sor.Nor.Sor.12/2555, Re: Regulations on Capital Supervision for Commercial Banks The Notification requires foreign bank branches to maintain minimum capital requirements at no less than 11.000% of aggregated risk weighted assets of the three major risks, i.e. credit risk, market risk and operational risk (known as Basel II Pillar I).

The computation of risk-weighted assets for credit risk of Bangkok Branch includes credit risk, counterparty credit risk and Non-delivery versus payment of the following exposures:

- o Assets and off-balance sheet items in banking book,
- o Off-balance items pertaining to OTC derivatives and repo style transactions for trading book items calculated for counterparty credit risk,
- o Position pertaining to unsettled payment and non-delivery (unsettled transaction),
- Assets and off-balance sheets items in trading book that do not meet the threshold level as stipulated in the Notification of the Bank of Thailand Re:Supervisory Guideline on Market Risk and Capital Maintenance to cope with Market risk of the banks.

The approach adopted for calculation of the credit risk weighted assets presently is Standardized Approach as the Branch's size is relatively small as compared to the OCBC Group.

For market risks, the risks may arise from movements of interest rate, foreign exchange rates and prices of instruments in the money and capital markets which may negatively affect the Bank. The minimum capital requirement for market risk is required for positions in trading book, including interest rate risk from interest rate exposure in trading account, equity instrument price risk from exposures pertaining to equity instrument in trading account, foreign exchange risk from all exposures pertaining to foreign currencies and commodity price risk from all exposures pertaining to commodity products.

OCBC Bangkok has selected the Standardized method for calculating the capital requirements for market risks as the transactions in trading book are neither complicated nor significant.

For operational risks, the Bank of Thailand permits banks to use 3 methods for calculation of equivalent risk-weighted asset: Basic Indicator Approach (BIA) and Standardized Approach (SA-OR) / ASA and Advance Measurement Approach (AMA). OCBC Bangkok has selected to use the Standardized Approach for calculation of the capital charge for operational risks.

The following tables are minimum capital requirement for each type of risk

#### Disclosure on market risks for trading book position

Market Risk" refer to the risks which banks may encounter due to the changes on the on and off balance sheet positions as a result of the variation in interest rate, price of equity instruments, foreign exchange rate and price of commodities. The variation in interest rate and price of equity instrument may be caused by general market risk and/or specific risk of the issuers.

OCBC Bangkok Branch does not engage in commodity and debt instruments for trading purposes. However, according to the notification of the Bank of Thailand no. SorNorSor. 94/2551, Re: Guideline on Supervision of Market Risk and Capital Requirement for Market Risk of Financial Institutions, OCBC Bangkok Branch is required to calculate risk weighted assets for transactions relating to foreign exchange and interest rate risks. OCBC Bangkok Branch has adopted the Standardized Approach for computation of the risk weighted assets for market risk.

Operational risks refer to the potential risks from damages that may arise from inadequacy or impairment of the Bank's internal controls, processes, personal and work

system or due to external events, including legal risk but excluding strategic risk and reputation risk.

Under the Bank of Thailand's notification no.SorNorSor 95/2551 and no.SorNorSor 5/2555, there are 3 methods i.e. Basic Indicator Approach (BIA), Standardized Approach (SA-OR) and ASA or Advance Measurement Approach (AMA) for the computation of risk weighted assets for operational risks.

OCBC Bangkok Branch has adopted SA-OR for the computation of risk weighted assets. To obtain the risk weighted assets for operational risk, OCBC Bangkok Branch allocates gross income to each business as prescribed by the Bank of Thailand and apply constant beta value to its respective business line.
