commitments and financial guarantees

Under TERS 9, the ECL model is applied to debt financial assets measured at amortised cost or EVOCI and most off-balance sheet loan **Expected Credit Loss Impairment Model** Under TFRS 9, credit loss allowances are measured on each reporting date according to a three-stage expected credit loss impairment

- Stage 1 On initial recognition, expected credit loss will be that resulting from default events that are possible over the next 12 months

 Stage 2 Following a significant increase in credit risk of the financial assets since its initial recognition, the credit loss allowance will be that resulting from default events that are possible over the expected life of the asset
- Stage 3 When a financial asset exhibits objective evidence of impairment and is considered to be credit-impaired, the credit loss allowance will be the full lifetime expected credit loss.
